3A

Province:

Torino

Web site:

WWW.GREEN-PLANET.IT

Sectors:

Infrastructure & transportation, Supply and equipment (construction material and equipment), Intelligent transport system (traffic control devices, toll and ticketing systems, software products), Ground (geological, hydrogeological and geotechnical engineering)

Company activity:

3a S.r.l. is an Italian company that has been working in the field of agrometeorology and DSS for agriculture for approximately 16 years. The company was created by the integration of the founders' expertise in meteorology, agronomy and ICT. Focusing its activities within the sphere of integrated farming, 3a S.r.l. organised itself to provide technology and consulting services, identifying agrometeorological information as a fundamental factor in agriculture, in the rational control of pest management and the use of water resources. It is a founding member of the AIAM (Italian Association of Agrometeorology) and participates in several research projects in agrometeorology. It is a recognised member of the ICT cluster in Turin (ICT Pole), which brings together the most innovative companies in industry. It is participating in several research projects in partnership with universities. To achieve its strategy, 3a is organised into two integrated areas: the first one deals with technical assistance in agriculture, while the second one provides ICT tools to support the farmers. A permanent technical team that supports farms in defining strategies for pest management, fertiliser plans, production plans, quality control and food safety provides agronomic consultancy. The ICT area, placed in Turin, deals with the management of agrometeorological information, the development of modelling and DSS platforms and techniques to disseminate information and warnings to farmers. To achieve both goals (supporting 3a's technology and farmers in the agro-management) a digital ecosystem of applications (Green Planet platform) has been created. This platform allows, on the one hand, the population of the source database with information required by the DSS, such as meteorological data, field observations, geo-referenced maps and, on the other, the generation of advanced processing, including the development of predictive modelling, and the dissemination of this information in different ways.

Company activity:

Gruppo Dimensione operates in consultancy and highly specialized services in the field of civil engineering and technological systems. The construction and restructuring of property with the “turnkey” formula represents the core business of Gruppo Dimensione. Its commitment is to guarantee a high-quality standard through the use of technologies and innovative materials, adequate equipment, using highly qualified and reliable personnel. Through a continuous search for excellence, it renders its values and culture available to the clients in order to satisfy their needs to the outmost. Gruppo Dimensione has a complete range of maintenance services, assuring customized solutions and cost optimization for final client. Together with its staff, it is also in a position to guarantee a 24-7 on-call service for emergency requirements. The offer also includes the possibility for the client to carry out the programmed maintenance of the electric, mechanical and data transmission systems so as to assure a continuous perfect functionality, thereby preventing obsolescence. The Group, through the division S.I.M.A.F. System, deals with the design, production and installation of: special window frames, both designed and traditional, in thermal-cut aluminium, cold-cut, mixed aluminium/wood, stainless steel and in special alloys; semi-structural and structural curtain walls in aluminium, galvanized and painted steel, stainless steel; external metal coatings in aluminium, Alucobond and painted steel; sockets with automatic sliding, hinged and circular doors. A particularity of this division is the production of frame components directly in its own workshop. To complete the offer, metal carpentry works are included, realized with the state-of-art technology and always with the maximum

	professionalism.
